Purpose of this document

This reference outlines how to use PEMS to record Onshore Cold Treatment Calibration record.

Note: An overview of PEMS and general functions can be found in the Reference: Plant Exports Management System (PEMS) Authorised Officer User Guide – Overview and general functions.

Initiating an onshore calibration record

To initiate an onshore calibration record, click the Home\(^1\) PEMS menu tab and then click the OSCT Calibration\(^2\) button.
The Create Calibration window will display.

If known, enter the RFP number\. The RFP number should be seven digits long. If an RFP number is entered it will prepopulate the Establishment number and name, the country and the commodities listed on the RFP with the information from EXDOC.

If the OSCT calibration is to take place at an establishment that is different to where the goods were inspected and packed, the establishment number for this location can be updated in this screen.

Where an RFP number is not provided, then you can enter the following details to the record:

Establishment number\. The establishment number should be three to four digits long and click Search\. The Establishment Name will update.

Destination Country\. Coolroom number\. Commodity\ and select Add\. The commodity will appear below. This step will need to be repeated if there are multiple commodities.

Click Create\. 

---

This is a CONTROLLED document. Any documents appearing in paper form are not controlled and should be checked against the IML version prior to use.
PEMS will populate the OSCT Calibration page. The calibration record will remain **Active** until the record is withdrawn, submitted, or cancelled.

![Image of OSCT Calibration page]

1 While the calibration record is active, the date provided on the calibration record is the date the calibration record was initiated.
OSCT Calibration page

The OSCT Calibration page displays the following sections:

- **RFP details**¹ – The RFP details will be blank. You will need to add the RFP number manually when the RFP number has been created, and the rest of the details in this field will populate automatically.
- **Calibration details**² – allows you to state if fumigation treatment has taken place, the coolroom number, and the commodity, packages and type.
- **Pulp Temperature**³ – allows you to record the temperature of the fruit.
- **Calibration Readings**⁴ – allows you to record the sensor readings and the air inlet and outlet probes.
- **Pre-cooling temperatures**⁵ – allows you to record the pre-cooling temperatures of the fruit/vegetable prior to it going into the cool room.
- **Comments**⁶ – allows you to record general comments regarding the calibration. See Section 3.8 Adding comments to a record in the PEMS AO User Guide – Overview and General Functions.

Step-by-step instruction on how to record or change data on this page is provided below.

---

¹ RFP details
² Calibration details
³ Pulp Temperature
⁴ Calibration Readings
⁵ Pre-cooling temperatures
⁶ Comments
Adding a commodity

To add a commodity to the Calibration details, click Add Commodity¹.

Enter the commodity¹, click Add² and then click Save³.

Recording the calibration details

To edit or record the Calibration details, click Change¹.
Enter the **Coolroom number**\(^1\), the number must match exactly including any spaces or special characters as PEMS will validate this information.

Enter the **Treatment Schedule** \(0\)°C\(^2\) and the **Treatment Duration Days**\(^3\).

To record the Packages and Type, select the **Commodity**\(^4\) from the drop-down. Enter the **Number of Packages**\(^5\) and select **Type**\(^6\) from the drop-down list. Click **Add**\(^7\). Repeat steps for multiple commodities and pack types.

Once complete, select **Save**\(^8\).
Recording the calibration readings

To record the readings under sensor 1, 2, 3, 4 and Air inlet and outlet probe, click **Open**.

The *Reading for Sensor 1* window will display.

**Sensor ID** will be displayed by default.

Record the **First** and **Second Reading**, if applicable, enter the third reading.

The **Correction factor** will be auto calculated by PEMS.

Click **Previous** and **Next** to navigate between the Sensors.

Click **Close** to exit the Sensor window at any time and return to the Calibration page.

Click **Save** to record the readings.
The *Calibration Readings* page will display the updated sensor readings.

**Recording the Pre-cooling temperatures**

To record pre-cooling temperatures, click *Change*.

- An Add Probe button will appear if the destination country is New Zealand, USA or Philippines.
- The first, second and third (if applicable) reading for every individual sensor must be identical.
- PEMS will accept reading between -0.0 to 0.3 degrees Celsius.
- For Indonesia, a reading for sensor 1 is mandatory.
- For USA, a first, second and third reading for each sensor is required.
- For Japan, probe placement image against every sensor can be viewed under probe.
- For the Philippines, PEMS will accept a reading of 0.0.
The *Pre-cooling Temperatures* window will display.

You can enter multiple comma-separated lists of readings under *Temperatures* and click **Update** to automatically populate **boxes 1–22**. For example, 0.1, 0.1, 0.2.

Click **Clear** if you wish to remove the readings.

You can also record readings directly into the **boxes 1–22**.

Click **Close** to exit the pre-cooling temperatures window at any time and return to the Calibration page.

Click **Save** to record the readings.
The calibration page will display the updated Pre-cooling temperatures.

! Pre-cooling temperatures are mandatory for Japan, Korea and Vietnam.
! A minimum of five pre-cooling temperatures is mandatory.
! PEMS will display a warning message if pre-cooling temperatures are above 3.0 and less than 4.0 degrees Celsius.
! PEMS will not record pre-cooling temperatures greater than 4.0 degrees Celsius to meet with importing country requirements.
! Pre-cooling temperatures are not mandatory for some countries, such as China.

Recording the Pulp temperatures

To record Pulp temperatures, click Change.

Pulp temperature

Sensor 1
Sensor 2
Sensor 3
Sensor 4
Sealed date and time
Seal Number
The *Pulp Temperatures* window will display.
Tick the box to confirm the probes placed as per Importing Country’s requirements¹.
Enter the Pulp temperature for Sensor 1, 2, 3 and 4².
Seal the cool room and enter the Seal number, Sealed date and Sealed time³.
Click Save⁴ to record the readings.
Submitting the OSCT calibration record

The OSCT calibration record can only be submitted after:

- all calibration results and data are recorded appropriately
- a Time Entry is provided for all AOs who recorded calibration results
- if applicable, attachments and correspondence relating to the calibration are recorded under the Communications tab.

Details on the Time Entry and Communications tabs can be found in Section 3: General PEMS functions in the PEMS AO User Guide – Overview and General Functions.

When you are ready to submit the calibration record, click the Actions tab, then click Submit.

A pop-up window will ask you to confirm that you want to submit the calibration. Click Ok.
Joining the re-calibration

Calibration of the cool room occurs twice, once prior to the cold treatment, and once post the cold treatment after the minimum required time period. The second calibration is called the re-calibration.

On completion of the onshore cold treatment an Authorised Officer will join the existing calibration record to record the re-calibration details.

Join the re-calibration record

To join the recalibration, from the home page click on Calibration.

The Search Calibrations page opens. Click on Advanced Search.
The Advanced Search page opens.

Enter the **Est. number**\(^1\).

For **Calibration Type**\(^2\), select OSCT from the drop-down box.

For the **Status**\(^3\) select Calibrated from the drop-down.

Click **Search**\(^4\).

From the **Search Results**, locate the Calibrated record and click on **Join**\(^5\).
The Join Calibration window opens.

To join the calibration, you need to enter the Seal number\(^1\).

Enter the Treatment start date and Treatment start time\(^2\). The treatment start time must be later than the Calibration End Time provided for the relevant calibration.

Enter the Treatment end date and the Treatment End time\(^3\).

Then click Join\(^4\).

The system will validate the treatment duration and, providing this information meets the minimum time required, it will automatically open the original calibration record.

If the information provided is not valid an error will be shown.
Re-calibration

Click on the **Re-Calibration Details** tab.

![OSCT Generic Calibration](image)
Re-Calibration page

The OSCT Calibration page displays the following sections:

- **RFP details** – The RFP details will be blank. You will need to add the RFP number when the RFP number has been created, and the rest of the details in this field will populate automatically.
- **Re-Calibration details** – allows you to record the recalibration date and time and the result.
- **Loading details** – Is only applicable if the commodity is to be exported by sea freight.
- **Re-Calibration Readings** – records the sensor readings and the air inlet and outlet probes.
- **Comments** – allows you to record general comments regarding the calibration. For more information see Section 3.8 Adding comments to a record in the PEMS AO User Guide – Overview and General Functions.

Step-by-step instruction on how to record or change data on this page is provided below.
Record the Re-Calibration Readings

To record the readings under sensor 1, 2, 3, 4 and Air Inlet and Outlet probe, click Open\(^1\).

The *Reading for Sensor 1* window will display.

Sensor ID\(^1\) will be displayed by default.

Record the *First* and *Second reading*\(^2\) and, if applicable, the third reading. The *Correction factor*\(^3\) will be auto calculated by PEMS.

Click Previous and Next\(^4\) to navigate between the Sensors.

Click Close\(^5\) to exit the Sensor window at any time and return to the Calibration page.

Click Save\(^6\) to record the readings.

\[^1\] For the Philippines the readings must be within +/- 0.3 of the original reading.

\[^2\] A third reading is required for the USA.
Record the Re-Calibration details

To record the re-calibration details, click **Change**.

The **Re-Calibration Details** window opens.

From the drop-down box, select a **Result**. Enter the **Re-calibration date** and **time**.

If applicable, enter **Comments**, then select **Save**.
Record the Loading details

This section is only applicable if the commodity is being exported via sea freight. To record the loading details, select Change.

The Loading Details window opens.

Select the relevant answer to *Does the importing country require supervision of loading?*

If the answer is **No**, Select Save.
If selected Yes\(^1\), enter the **Container number\(^2\).**
Decide if the **Container Approval\(^3\)** is Yes or No.
Enter the **Seal number\(^4\).**
Click **Save\(^5\).**
Completing and submitting the calibration record

The OSCT record can only be submitted after:

- the re-calibration results and data are recorded appropriately
- a Time Entry¹ is provided for all AOs who recorded OSCT calibration results
- OSCT Data Logs need to be attached and any other attachments and correspondence relating to the calibration are recorded under the Communications² tab.

Details on the Time Entry¹ and Communications² tabs can be found in Section 3: General PEMS calibration functions the PEMS AO User Guide – Overview and General Functions.

When you are ready to submit the OSCT re-calibration record, click the Actions³ tab, then click Submit⁴.
If Loading details have been entered, the OSCT Calibration window will display.

- Confirm that the container meets all three requirements displayed as checkboxes.
- Select if you want to **email the exporter/EDI user on the submission of the inspection**. When selecting this option, the OSCT calibration submit confirmation box will expand.
- Enter the **email address**, this can be multiple email addresses each separated by a comma.
- Enter in any **Comments** that are to be included in the email.
- Click **Submit**.
Download OSCT report

You can download the OSCT record report after a calibration record is submitted in PEMS.

To download the calibration report, click the Actions\(^1\) tab and then select Download Report\(^2\).
A PDF document will be downloaded onto your device (next two screen shots).
Once the document is opened, it will display the relevant OSCT record.
Re-calibration results:
Date of Re-calibration: 23/10/2021  Time of Re-calibration: 10:00
